

SPACE OPERATIONS PROJECT OFFICE HIGHLIGHTS

June 3, 2011

ISS AND HUMAN HEALTH OFFICE (MSI)

- **ISS Research Project:**

- **Light Microscopy Module Bio-2 Operations Continue on International Space**

Station: Science LMM Bio-2 continued this week with the operation of suspended tissue sample cells (samples 3 and 4). This image taken at 20x shows some of the cells clustering together. Features come in and out of focus as the stage is moved (up and down) in response to scripted ground commands to different Z-axis locations. Operations will continue through June 9, 2011. (POC: MSI/Ron Sicker, 216-433-6498)
